## CUV Direct-attach Cuvette Holders

## CUV-DA

To mount a cuvette holder directly to your light source, Avantes offers a range of directattached cuvette holders. The CUV-DA connects to the AvaLight-DHc, -XE and -(HP) LED light sources, the CUV-DA-DHS to the AvaLight-DHS and AvaLight-DHS-BAL and the CUV-DA-HAL to the AvaLight-HAL. These devices can be used for either absorbance or fluorescence measurements.

All CUV-DA cuvette holders feature two 90-degree and one 180-degree threads that allow the COL-UV/VIS collimating lens to be connected for absorbance or fluorescence setups. Each of CUV-DA
series cuvette holders includes two $\mathrm{SiO}_{2}$ aluminum mirrors to further enhance fluorescence signals. These are mounted at 90 degrees to the excitation source and emission output. The CUV-DA has a 5 mm wide filter slot.

For the AvaLight-HAL and the AvaLightDHS the direct-attached cuvette holders can be mounted directly on the front panel of the light source by removing the standard filter holder.
